Claims 5-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 5, line 8 recites "when used in conjunction with a second nail pulling detail". It is unclear if the "second nail pulling detail" is intended to be a positive limitation of the claim. The recitation appears to be merely an inferential inclusion because, certainly, this "second nail pulling detail" is not structurally correlated with any other structure previously recited in the claim. Where is the "second nail pulling detail" located and what is it connected to? The claim certainly does not answer these questions and that is why the claim is vague and indefinite.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hreh in view of Smith.

Hreh shows a prying tool having an L-shaped flat bar 12,16 having a V-shaped nail pulling detail, a secondary prying surface 18 having a second V-shaped nail pulling detail.

Smith teaches that the distal end of the L-shaped portion of a prying tool may have a plurality of fingers.

Art Unit: 3723

To provide a plurality of fingers at the distal end of the L-shaped portion of the prying tool of Smith would have been obvious for one skilled in the art at the time the invention was made in view of the disclosure of Smith. One of ordinary skill in the art would have been motivated to do this in order to provide the tool with additional prying applications to improve the versatility of the tool. The sizes chosen for the width and thickness of the tool is no more than an obvious matter of design choice absent a showing of criticality for these features. In any case the Smith and Hreha tools appear to show approximately these same sizes. The plurality of fingers in Smith may be termed nail and staple pulling detail since these fingers are capable of prying both nails and staples.

Claims 1-4 are allowed.

Applicant's remarks have been given careful consideration. It is wholly unclear why applicant considers the "second nail pulling detail" to be a positive limitation of the claim. If the "second nail pulling detail" is intended to be a positive limitation of the claim it is peculiar that applicant didn't bother to structurally correlate the "second nail pulling detail" with any other structure previously recited in the claim. The new art rejection of claims 5 and 9 was precipitated by the new breadth of scope presented by applicant's recent amendment to these claims.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Art Unit: 3723

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
